

Sales Data Analysis Report

Comprehensive Business Insights and Visualizations

Executive Summary

TOTAL REVENUE

₹12,365,048

TOTAL TRANSACTIONS

100

AVG. ORDER VALUE

₹123,650

This report provides a high-level overview of sales performance, analyzing regional contributions, product viability, and customer purchasing patterns. The data reflects strong core product sales with significant opportunities for regional expansion and product bundling.

Categorical Performance

Key Insights: Region & Product

- Regional Disparities:** The North and South regions are the primary revenue drivers, collectively accounting for ~62% of total revenue. The West region is underperforming, highlighting a need for localized marketing or distribution optimization.
- High-Ticket Dominance:** Laptops (₹3,889,210) and Tablets lead product sales. High-value tech items form the backbone of the revenue stream.

- **Bundling Opportunity:** Headphones and Monitors lag behind. Given the strong performance of Laptops, introducing cross-sell bundles (e.g., discounted monitors with laptop purchases) could easily lift lower-performing categories.

Revenue Trends Over Time

Key Insights: Sales Velocity & Behavior

- **Volatility in Daily Sales:** Revenue shows significant peaks and troughs day-over-day, suggesting sales might be driven by specific promotional events, B2B purchasing cycles, or restock days rather than consistent retail foot traffic.
- **Bulk Purchasing Habits:** The high average order value (₹123,650) coupled with multi-item transactions indicates a customer base that likely includes businesses, offices, or bulk buyers.
- **Strategic Recommendation:** Focus on customer retention and account management for bulk buyers. Implementing volume discounts or loyalty programs for B2B clients will likely yield higher long-term returns than targeting single-item consumers.
